

Installation Instructions

YAMAHA

Track Style Enclosure

Yamaha G14/16/19/22:

The track enclosures are installed by mounting the aluminum rails to the roof of the car. The aluminum rails are attached to the golf car with the "C"-channel facing downward and outward, with the flat side of the rail placed underneath the lip of the roof.

The rails are installed by using pop rivets. Pop rivet one in the front of the roof and one at the back of the roof. Additional rivets can be added in the center and at additional intervals.

After the rails are installed, just slide the beaded portions of the enclosure through the c-channels.
